

## Adult Dental Health in Pipestone County

### Findings from the 2015 Southwest Minnesota Healthy Communities Survey

The 2015 Southwest Minnesota Healthy Communities Survey was conducted to learn about the health and health habits – physical activity, nutrition, tobacco use, dental health, and mental health – of residents living in 16 counties in southwest Minnesota. Southwest Health and Human Services contracted with Wilder Research to produce summary reports for each of the six counties in their service area. This fact sheet summarizes survey results related to the dental health of adult residents in Pipestone County.

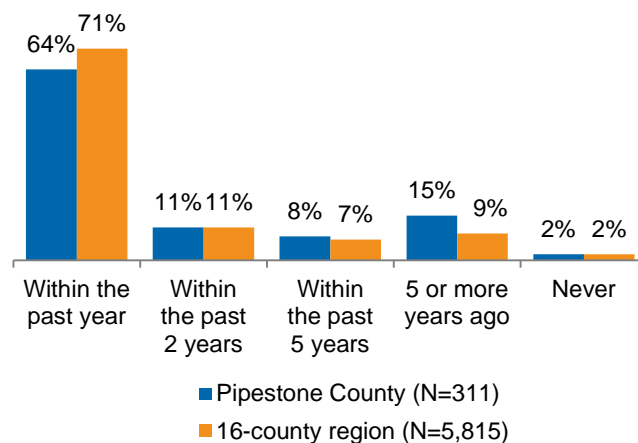

The survey was conducted April through July 2015 and was sponsored in part by the participating counties’ grants from the Minnesota Department of Health’s Statewide Health Improvement Program (SHIP).

In the following report, when response percentages are reported as higher or lower in the county compared to the 16-county region, this refers to a difference of 10 percentage points or more.

#### *Current dental care*

Nearly two-thirds (64%) of residents from Pipestone County reported that they had their last dental exam or teeth cleaning within the past year.

#### LAST TIME RESPONDENTS HAD A DENTAL EXAM OR TEETH CLEANING

#### *Barriers to accessing dental care*

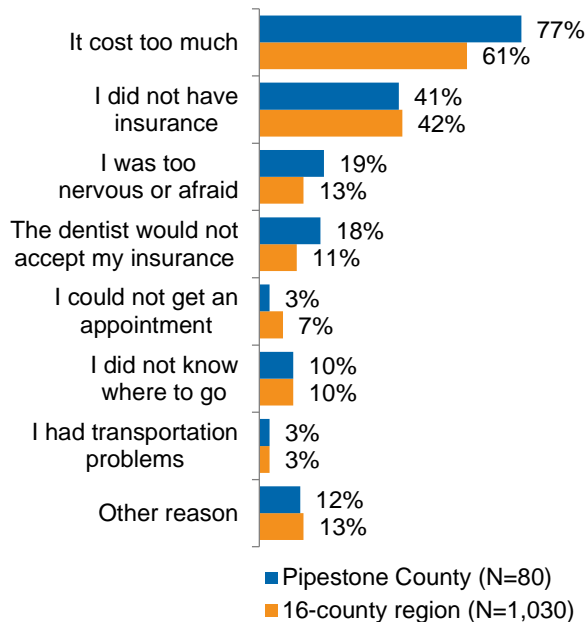

Almost one-third (30%) of respondents from Pipestone County reported that during the past 12 months, there was a time they needed dental care but did not get it or delayed getting it. There is no significant difference in delayed dental care between the county and region.

#### RESPONDENTS WHO DID NOT GET OR DELAYED GETTING DENTAL CARE IN THE PAST 12 MONTHS

Of those who did not get or delayed getting dental care in the past 12 months, the most common reasons were because it cost too much and they did not have insurance.

#### REASONS FOR NOT GETTING OR DELAYING DENTAL CARE

#### *Compared with the region...*

Overall, the dental health of Pipestone County residents is comparable to the dental health of residents of the region. However, residents of Pipestone County were more likely than residents of the region to have not gotten or delayed getting dental care because it cost too much.
