

Adult Mental Health in Redwood County

Findings from the 2015 Southwest Minnesota Healthy Communities Survey

The 2015 Southwest Minnesota Healthy Communities Survey was conducted to learn about the health and health habits – physical activity, nutrition, tobacco use, dental health, and mental health – of residents living in 16 counties in southwest Minnesota. Southwest Health and Human Services contracted with Wilder Research to produce summary reports for each of the six counties in their service area. This fact sheet summarizes survey results related to the mental health of adult residents in Redwood County.

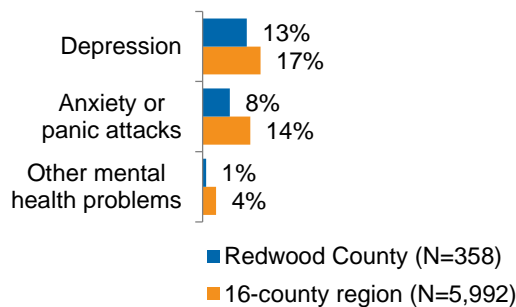

The survey was conducted April through July 2015 and was sponsored in part by the participating counties' grants from the Minnesota Department of Health's Statewide Health Improvement Program (SHIP).

In the following report, when response percentages are reported as higher or lower in the county compared to the 16-county region, this refers to a difference of 10 percentage points or more.

Mental health history

Thirteen percent of Redwood County residents have been told by a doctor that they have depression. Eight percent have been told they have anxiety or panic attacks.

HAVE YOU EVER BEEN TOLD BY A DOCTOR THAT YOU HAD...

Barriers to accessing mental health care

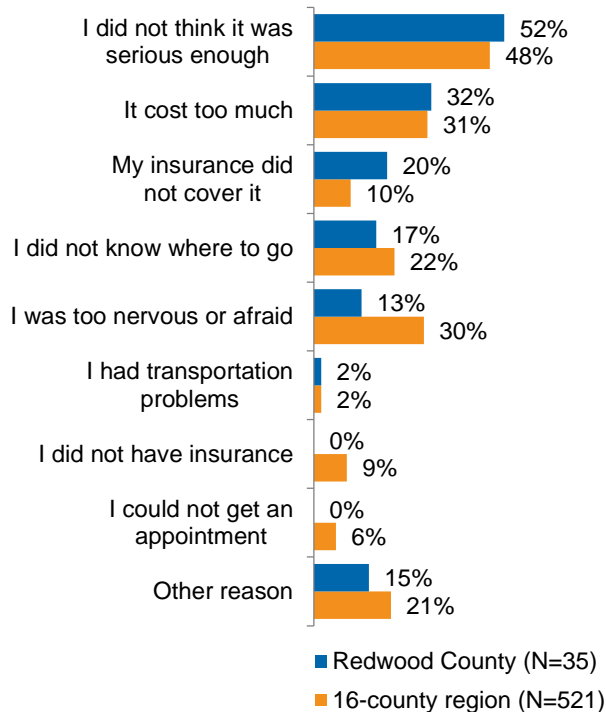

Eight percent of respondents said that they did not get or delayed getting mental health care when they needed it in the past year. There is no significant difference in delay mental health care between the county and the region.

OF THOSE WHO FELT THEY NEEDED TO TALK TO SOMEONE - RESPONDENTS WHO DID NOT GET OR DELAYED GETTING MENTAL HEALTH CARE IN THE PAST 12 MONTHS

Over half (52%) of respondents who did not get or delayed getting mental health care did so because they did not think it was serious enough. Nearly one-third did not get or delayed getting the mental health care they needed because it cost too much.

REASONS FOR NOT GETTING OR DELAYING MENTAL HEALTH CARE

Survey respondents who had seen a doctor, nurse, or other health professional about their own health in the past 12 months were asked whether they had been asked by their health professional about a series of topics. Thirty-six percent said their doctor asked them about their stress, and 28 percent said they were asked about mental health concerns.

Compared with the region...

Overall, the mental health of residents in Redwood County is comparable to the mental health of residents in the region. However, residents of Redwood County were more likely than residents of the region to have not gotten or delayed getting the mental health care they needed because their insurance did not cover it and were less likely than residents of the region to have not gotten the mental health care they needed because they were too nervous or afraid.
